B-Tag Meeting 10 May 2002

- SVX optimization (Doug Glenzinksi)
- Generator level b-jet studies (Carsten Rott)
- Intro to/status of tracking (Matt Herndon)
- Offline defaults for B-Tag group (Aaron)
- AOB

Offline Defaults for B-Tag Group

- No good frozen release for tracking, yet...
- Will need to use integration releases until 4.6.0.
- Start with 4.5.0int5 today. I will be the contact person and issue edicts on acceptable code releases.
- Start with default alignment table. Just leave alignment talk-to out of your tcl file, it will pick the right one. This has global and local alignment `ofotl_prd_read 100020 3 TEST`.
- Need to rerun tracking

```
add(new SiClusteringModule());
add(new CT_TrackingModule());
add(new SiPatternRecModule());
```

- Drop `ISLD_StorableBank` and all Si tracks on input

```
talk DHInput
processDropList add PROD
dropList add ISLD_StorableBank
exit
```
