# New Version of Frozen Release, 4.7.1

- Hopefully, we now have a good frozen release for tracking: **4.7.1**
- Only need updates to `BTagMods` and `BTagObjects`
- See `http://www-cdf/internal/physics/top/RunIIBtag` for full instructions

# Don't Retrack By Yourself

- In order to minimize possible, confusion we have come up with tcl files which should be used with ProductionExe version 4.7.1 to retrack

- You should use the output from ProductionExe with these tcls instead of retracking inside your private exe

```
   setup cdfsoft2 4.7.1
newrel -t 4.7.1 4.7.1
cd 4.7.1
addpkg BTagMods v4_7_0int4
cd BTagMods ProductionExe Production/ProductionExe.tcl -o output.root -i input.root
```

# Start Trying Out SecVtxTest

Try using this version of SecVtxTest with the output of ProductionExe mentioned before:

```
setup cdfsoft2 4.7.1
newrel -t 4.7.1 4.7.1
cd 4.7.1
addpkg BTagMods v4_7_0int4
addpkg BTagObjects v4_7_0int4
gmake nobin BTagMods.tbin
SecVtxTest BTagMods/test/run_secvtx_noRecon.tcl
```
